

SATAY STICK INSERTER

With this machine it is possible to automatically produce up to 900 satays per minute. These satays can be of any kind, e.g. chicken, beef, pork or meat substitutes. The interchangeable buffer holds sticks for producing 15 minutes straight and this buffer is replaced only within seconds.

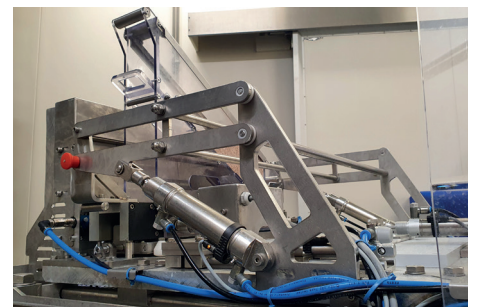

Because of the fact that the skewer sticks are made of wood, the quality of these sticks can be inconsistent. This can cause inconsistency van cause errors. This machine minimalizes these errors and when an error does occur the downtime is reduced to a minimum because of the easy accessibility of the critical areas.

The stick inserter is designed to connect to the GEA Multiformer. It is possible to change the machine to connect to other machines. Ask us for the possibilities.

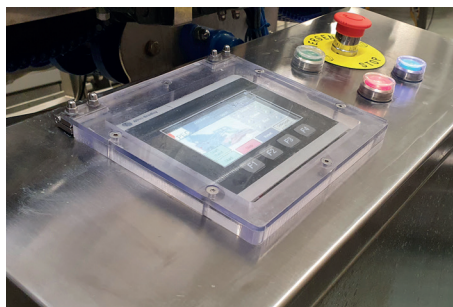

■ HIGH CAPACITY

■ HIGH DUTY CYCLE

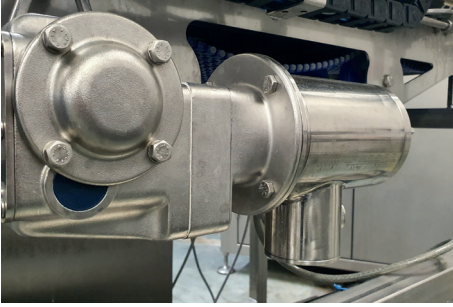

■ TOUCHSCREEN

■ LARGE BUFFER

■ STAINLESS STEEL DRIVE

■ LOW MAINTENANCE

■ FESTO PNEUMATICS

■ SPECIFICATIONS

Speed	45 strokes per minute
Number of rows of sticks	10 - 20
Length of sticks	60 - 300 millimetre
Diameter of sticks	Ø 2,4 - Ø 3,0 millimetre
Mass	200 kilograms
Dimensions	1650 x 1100 x 1640 millimetre
Voltage	230 Volts

Conveyor belt

Type	Flush grid (35% open space)
Output height	Adjustable
Width	400 - 900 millimetre
Drive power	0,18 kW

■ USER FRIENDLY
